# Workplace Skin Checks

**Approximately, two in three Australians will be diagnosed with skin cancer by the time they are 70, with more than 750,000 people treated for one or more non-melanoma skin cancers in Australia each year. Non-melanoma skin cancer is more common in men, with almost double the incidence compared to women.**

Excluding non-melanoma skin cancer,\* melanoma is the third most common cancer in Australians. In 2013, 12,744 Australians were diagnosed with melanoma.

Every year, in Australia:

skin cancers account for around 80% of all newly diagnosed cancers  
the majority of skin cancers are caused by exposure to the sun  
GPs have over 1 million patient consultations per year for skin cancer  
the incidence of skin cancer is one of the highest in the world, two to three times the rates in Canada, the US and the UK.

## **The Service:**
